linkedin.com/in/nabin-bogati-1b0a4a123

Backend engineer with 7+ years of designing, building and running production systems in Python and Go: real-time WebSocket services, scheduled data pipelines, PostgreSQL and Redis, and the Linux infrastructure underneath. I lead a team of 4–5 developers, and I build agent tooling (skills pipelines, persistent memory, MCP) that makes AI-assisted development reliable enough to ship.

SKILLS

Languages	Python, Go, SQL, TypeScript, Bash, Dart
Backend	FastAPI, aiohttp, Flask, Django REST Framework, WebSockets, pub/sub (Centrifugo)
Data	PostgreSQL, Redis, MongoDB, schema design and query optimization
Infrastructure	Linux, Docker, HAProxy, DigitalOcean, Prometheus, cron, Git
AI & agents	Claude Code, agent skills, MCP servers, agent memory (Hindsight), local LLMs
Also	Next.js, React, Flutter

EXPERIENCE

Teslatech Pvt. Ltd. — Lalitpur, Nepal
Lead Backend Developer — Apr 2023 – Present
Backend Developer — Feb 2019 – Apr 2023

- Architect and build backends for real-time online games in async Python (FastAPI, aiohttp, WebSockets) on PostgreSQL, Redis and MongoDB, including Callbreak, which serves thousands of concurrent players.
- Lead and mentor a team of 4–5 developers across design, code review, testing and deployment.
- Designed a Centrifugo pub/sub layer for real-time messaging, and REST APIs and data models built to scale.
- Run production on DigitalOcean: server setup, hardening, monitoring and troubleshooting; HAProxy for load balancing and high availability; Python and Bash automation on cron.

Dryice Pvt. Ltd. — Lalitpur, Nepal
Backend Intern — Jul 2018 – Jan 2019

- Built Django REST Framework apps and their automated tests, and a Yahoo Finance stock-price crawler.

CloudFactory Nepal · Cloud Analyst: data analysis and QA support — Jan 2017 – Jun 2018

SELECTED PROJECTS

NEPSE Desk · Go, PostgreSQL, Next.js, Docker — github.com/nabinbogati/stock-analyzer

- Stock-market data platform: a daily Go pipeline syncs prices incrementally, adjusts history for corporate actions, computes indicators and market breadth, and grades eight trading strategies against the history.
- Multi-user Next.js app with portfolio ledger (WACC, P&L), hashed-token sign-in, roles, and admin jobs that share a lock with cron.

Callbreak game server · Go, WebSockets, Redis, Prometheus — github.com/nabinbogati/callbreak-multiplayer

- Authoritative multiplayer server: 800 concurrent players on one core at 625 µs median and 13.6 ms p99 move latency, with zero dropped connections.
- One goroutine owns each table's state, so the hot path is lock-free. A pure rules engine shares its tests with the Flutter client.

Agent engineering pipeline · Agent Skills, MCP, Claude Code — github.com/nabinbogati/SKILLS

- Two-stage skills pipeline for coding agents: clarify into a compact spec, then build surgical changes and end with a production-ready check, backed by long-term memory and a code-graph MCP server.
- Also a Conventional Commits skill for Claude; I test local LLMs and agent harnesses on my own hardware.

Connecting Dots · Flutter · one-line puzzle game, designed, built and published solo — Live on Google Play

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science and Information Technology · Nagarjuna College of IT, Lalitpur — 2014 – 2018

Foundational C# with Microsoft (freeCodeCamp, 2025) · Google: Crash Course on Python; Using Python to Interact with the Operating System (2020)
