Hiring Manager
[Company]

Dear Hiring Manager,

I'm applying for the **[Role]** position at [Company]. I'm a backend engineer with 7+ years of designing, building and running production systems in Python and Go, and I currently lead a backend team of 4–5 developers. [One sentence on why this company or product specifically.]

What I'd bring:

- **Production backends, end to end.** I've built async Python APIs, WebSocket services and a Centrifugo pub/sub layer for systems with thousands of concurrent users. I also run them: PostgreSQL and Redis, HAProxy, server hardening and monitoring.
- **Correctness under load.** My Go game server handles 800 concurrent players on a single core at a 13.6 ms p99, because each table's state is owned by one goroutine and the hot path takes no locks.
- **Data systems.** I built NEPSE Desk, a Go pipeline and Next.js platform that ingests stock-market data daily, adjusts it, computes indicators and grades trading strategies against the history.
- **Reliable AI-assisted engineering.** I've built a skills pipeline that makes coding agents clarify before they build, keep their changes surgical and review their own work, with long-term memory and a code-graph MCP server behind it.

I'd welcome the chance to talk about how I can help [Company] with [a specific goal or challenge from the job post]. My CV is attached, and my projects are at nabinbogati.com.np.

Sincerely,
Nabin Bogati
